AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1-21. (canceled)

- 22. (original) Biocompatible coating, characterised in that the coating comprises,
- a binding layer in contact with the substrate comprising mainly hydrated calcium aluminate particles of less than 2 μm ,
 - a bulk layer comprising mainly hydrated calcium aluminate having a grain size between 3 and 30 μ m, and an outer layer comprising a bioactive or biocompatible material, preferably calcium phosphate, apatite, calcium carbonate or calcium fluoride.
 - 23. (original) Biocompatible coating according to claim 22, characterised in that the coating is capable of carrying drugs.
- 24. (original) Surface coated device, comprising a substrate and a surface coating covering at least a section of the substrate surface, **characterised in that** the surface coating is a biocompatible surface coating made by using the method comprising the steps of:

Docket No. 1510-1070 Appln. No. 10/691,542

-preparing one powder mixture, or several powder mixtures having different chemical composition, wherein at least one of said powder mixtures comprise a non-hydrated hydraulic ceramic powder binder phase,

-pre-treating the surface of a substrate to increase the adhesion between the substrate and the ceramic coating,

-applying one or more layers of said non-hydrated powder mixtures on top of each other on the substrate, and

-hydrating the powder layer/layers utilizing a curing agent comprising ions of carbonates, phosphates or fluorides.

- 25. (original) Surface coated device according to claim 24, characterised in that the substrate is Ti or alloys thereof, stainless steel, Co-Cr alloys, another biocompatible metal, polymeric or ceramic material, or any combination thereof.
- 26. (original) Surface coated device according to claim 24, characterised in that it is a medical device, medical device for implantation, artificial orthopedic device, spinal implant, joint implant, attachment element, bone nail, bone screw, or a bone reinforcement plate.

Docket No. 1510-1070 Appln. No. 10/691,542

27. (original) Surface coated device according to claim 24, characterised in that the surface coating is a biocompatible surface coating comprising:

a binding layer in contact with the substrate comprising mainly hydrated calcium aluminate particles of less than 2 $\mu\text{m}\textsc{,}$

a bulk layer comprising mainly hydrated calcium aluminate having a grain size between 3 and 30 $\mu m\text{,}$ and

an outer layer comprising a bioactive or biocompatible material, preferably calcium phosphate, apatite, calcium carbonate or calcium fluoride.
